

KENNEL RUNS

Veterinary dog kennels well thought out.
Efficient both for maintenance and to limit
the spread of bacteria and viruses.

KENNEL RUNS

BIO-SECURITY

VETERINOV DIFFERENTIATES ITSELF
IN PARTICULAR BY THE BIOSECURITY of
its kennels. This is done in various ways.

ANIMAL COMFORT + SAFETY

OUR KENNEL RUNS REDUCE
STRESS IN ANIMALS, improve their well-being
and socialization.

PROFESSIONAL COMFORT + SAFETY

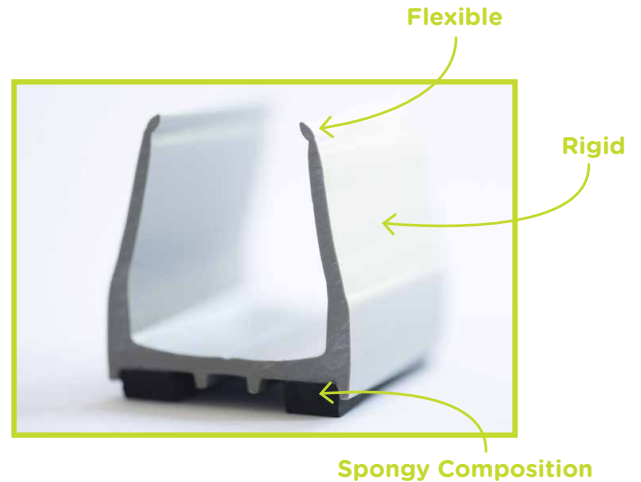

OUR KENNEL RUNS ALLOW
PROFESSIONALS TO WORK more efficiently
and safely.

BI♥-SECURITY

VETERINOV MOULDING

Our **Veterinov moulding** is made of PVC using a co-extrusion manufacturing process. A flexible PVC ensures a complete seal by embracing the panel on each side, while a more rigid PVC ensures strength and resistance to the structure.

Our **moulding slides** onto the floors so that no substance can pass through. Its technology gives it perfect **flexibility for uneven or irregular floors**, whether it be a positive or a negative alteration in height up to 1/4" inches at the floor.

Water, rot and wear proof, it is the pressing pressure of the moulding screwed to the floor that makes the kennel impermeable. Its spongy composition **crashes to the ground and forms a perfectly sealed barrier** that prevents the accumulation of unwanted materials and the infiltration of fluids.

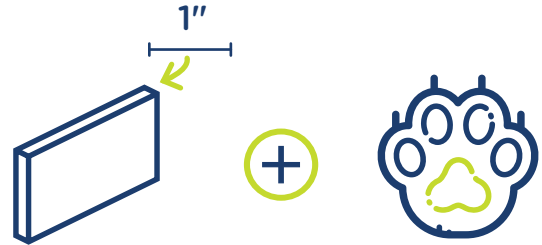

This **biosecure barrier** eliminates cross contamination.

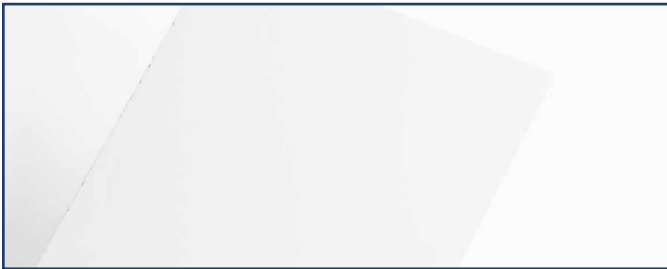

BI♥-SECURITY

LAMINATED STRUCTURAL PANEL

Our panel has been created and tested entirely by our team. One inch thick, it is scratch resistant, durable to cleanings, and impervious to urine and other liquids.

Our panel is said to be impervious to animal impacts. Its composition gives it a degree of absorption in addition to cushioning animal loads plus its smooth finish makes it easy to clean and disinfect.

RESEARCH

A bone folder was used to demonstrate the panel's resistance against the claws of your dog.

MATERIALS

- Bone
- Structural panel

RESULT

Our structural panel responds positively. There are no marks that could affect biosecurity or alter its use.

CONCLUSION:

The panel **meets biosecurity standards and is safe**. The smooth surface is maintained and not damaged by your animals claws which allows for complete disinfection when cleaning it.

BI♥-SECURITY

VETERINOV FACADES

Our **kennel runs** are made of high-quality materials such as stainless steel, PVC, tempered glass as well as composite materials.

4 types of facades including **3 specially optimized for biosecurity.**

OPTIMAL BIOSECURITY

GLASS

Tempered glass doors are easy to maintain, resist the wear and tear of time, and are safe. This type of facade allows for better biosecurity since the microbes spread by sneezing end up in the glass and not outside the kennel.

OPAQUE / SEMI-OPAQUE

Our opaque facade is made of tempered glass with vinyl affixed to it. The vinyl is applied to the exterior wall of the glass. This type of facade provides an effect of tranquility to more anxious animals.

In addition to facilitating maintenance, it is durable and helps improve biosecurity by keeping germs inside the kennel. This facade can be custom altered to match your taste.

BIOSÉCURITÉ

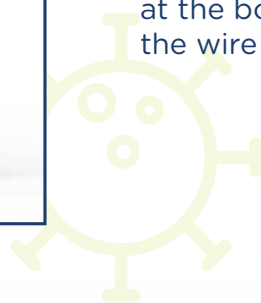

GOOD BIOSECURITY

HYBRID

The hybrid facade combines the best part of the mesh and glazed facades. The glass at the bottom maintains biosecurity while the wire mesh provides better ventilation.

LOW BIOSECURITY

WIRE MESH

The wire doors allow for great ventilation of the enclosure for dogs. In addition to offering the professional more proximity to the animal, it gives the animal a better interaction to the external environment. The wire mesh maximizes the dogs senses, especially smell and sound.

KENNEL RUNS

ANIMAL COMFORT + SAFETY

5 SENSES

Our design team created the kennel with a good attention to detail. All the senses of the animal have been taken into account:

Hearing

Noise Reduction.

The integration of the plastic into the handle reduces the vibrations and noises compared to metal on metal.

The composition of our kennel walls (structural panel) absorbs sound waves and decreases ambient noises.

Sight

Animal and its environment.

Our facades are adapted: a clear view allows proximity of the animal to its environment, the **Opaque Front option** is optimal to calm more anxious dogs.

Touch

Injuries and diseases limitation.

Our kennels do not have any sharp edges that could injure the animal. Our structural panels are straight and smooth.

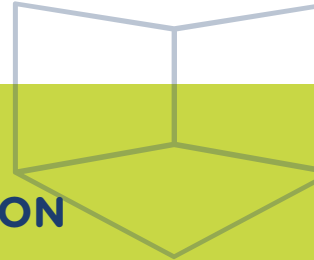

The **Transfer Door Option** is secure. Its sliding mechanism which is inaccessible to the animal, is integrated into the panel itself. In addition, the rope runs along the crossbars of the kennel.

Oral

Oral cross contamination.

Our Veterinov moulding creates a bio-secure barrier on the ground. So, there is no risk that the animal will lick fluids from its neighbour (biofilm).

DIMENSION

To meet animal welfare standards, several sizes are available depending on your animal. It is important to select a dimension that allows the animal to stand and sit normally. He should be able to turn around, stretch and lie down fully with his limbs fully extended.

Smell

Ventilation.

The **Mesh Front option** provides better ventilation of the kennel and does not in any way interfere with the animal's sense of smell.

Our kennel areas are free of elements that could cause stress to your animals or harm their health. Solid and stable, our kennels are designed and thought out to prevent injuries and the escape of your animals.

KENNEL RUNS

PROFESSIONAL COMFORT + SAFETY

VETERINOV

Our handle is comfortable to use. It allows a good grip, ensuring better control of the door. Our designers have thought through all the details:

A safety latch has been added to the handle mechanism thus preventing unwanted opening (by tongue or muzzle). It is easy for the professional to remove the protective latch (inaccessible to the animal) with just one finger.

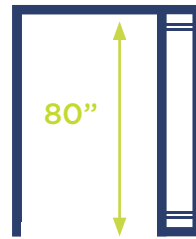

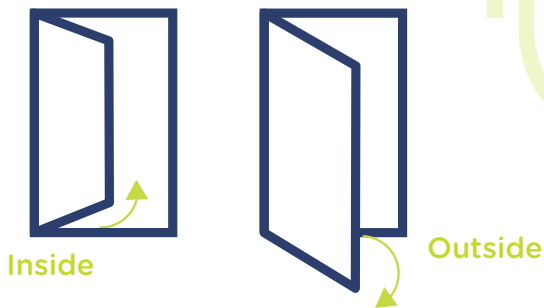

The insertion of a plastic slide in the mechanism reduces harsh sounds making it more enjoyable to use.

KENNEL RUNS

PROFESSIONAL COMFORT + SAFETY

DOOR

Our kennel door opens in **2 directions**, inside and outside.

The interior opening acts as a shield, it provides additional protection to professionals when interacting with more aggressive dogs. The exterior opening frees up interior space when handling larger animals or maintaining kennels.

STRUCTURE

The opening of the kennel is a clear 80 inches which allows for safe and unhindered access.

The kennels are easily maintained by having smooth surfaces, the design of the moulding and technical elements which do not allow for accumulation of dust and dirty water.

The versatility of our products allows us to customize and add options over time.
